Introduction

What does it do?

Hype HTML5 enables TYPO3 to render valid and semantically correct HTML markup. Besides that it provides some neat features to spice up specific HTML elements, like a feature to define namespaces for the HTML element.

Users manual

A user manual does not apply as this extension is intended to be used by administrators and developers only.

Administration

Installation

1. Import and install the extension.
2. Include the static typoscript template files.
3. Adapt the configuration to your needs.

Configuration

TypoScript

Property:	Data type:	Description:	Default:
markup.doctype	string	Overrides the default HTML doctype. Setting this is completely optionally as TYPO3 already renders a nice HTML5 doctype.	<i>Empty.</i>
markup.htmlTag	string	Overrides the default HTML tag. Specific markers are replaced: {\$language} will be replaced by a 2-character language token. {\$namespace} will be replaced by the defined namespaces.	<i>See file.</i>
markup.htmlTag.namespace	array	Definitions of namespaces which get wrapped into the HTML tag.	<i>See file.</i>
clean.removeScriptAttributes	boolean	Removes the type attribute from script tags in the source.	1
clean.removeStyleAttributes	boolean	Removes the type and the media="all" attribute from related stylesheets.	1
clean.removeImageAttributes	boolean	Removes the width and the height attribute from image tags.	1

Tutorial

No tutorial available.

Known problems

No problems known.

To-Do list
